

Name: Ibanga, Denisse Margaret P.
Section: III-BINS

FINAL CERTIFICATION 2

Certified in Cybersecurity Training (CC)

Description: The Certified in Cybersecurity (CC) training from ISC2 is an entry-level certification program that teaches the fundamentals of information security. It covers core concepts such as the CIA triad (confidentiality, integrity, and availability), authentication methods, risk management terminology and strategies, and the different types of security controls (physical, technical, and administrative). The curriculum also includes the basics of incident response, business continuity, network security, access control models, and the importance of governance through laws, policies, standards, and procedures. The training is designed for beginners and career changers, and it provides a broad understanding of how to protect data, systems, and people, while establishing a common vocabulary and mindset used by security professionals.

Total Number of Training Hours: 13 hours
